

# New York State Freight Network Atlas

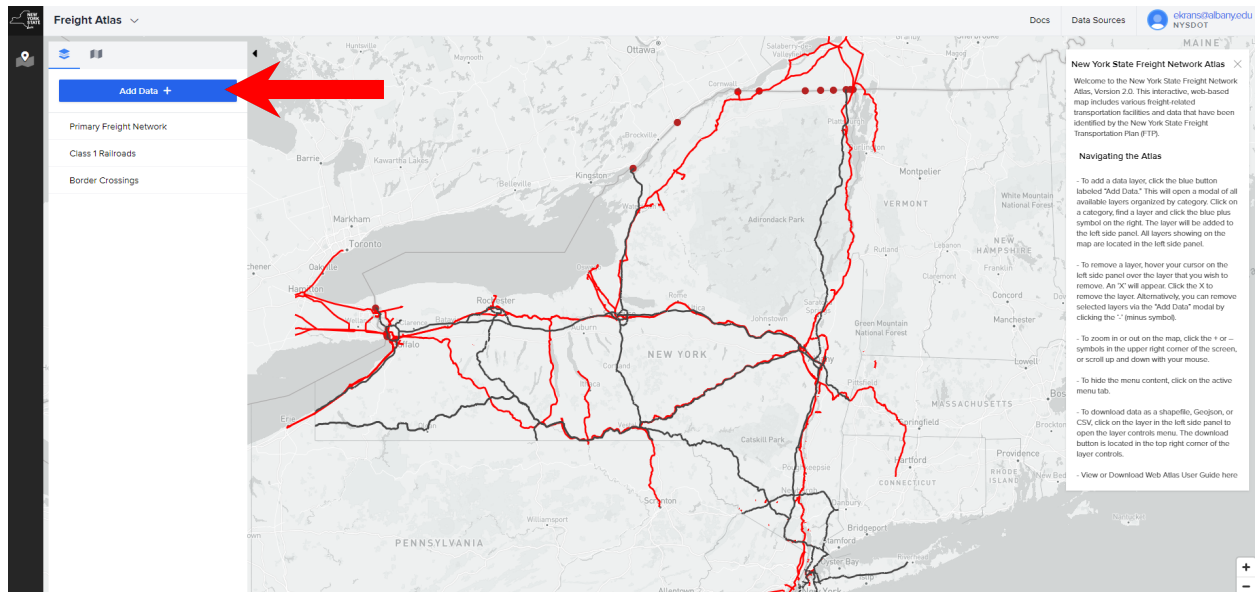

## User Guide

Welcome to the New York State Freight Network Atlas, Version 2.0. This interactive, web-based map includes various freight-related transportation facilities and data identified by the New York State Freight Transportation Plan (FTP).

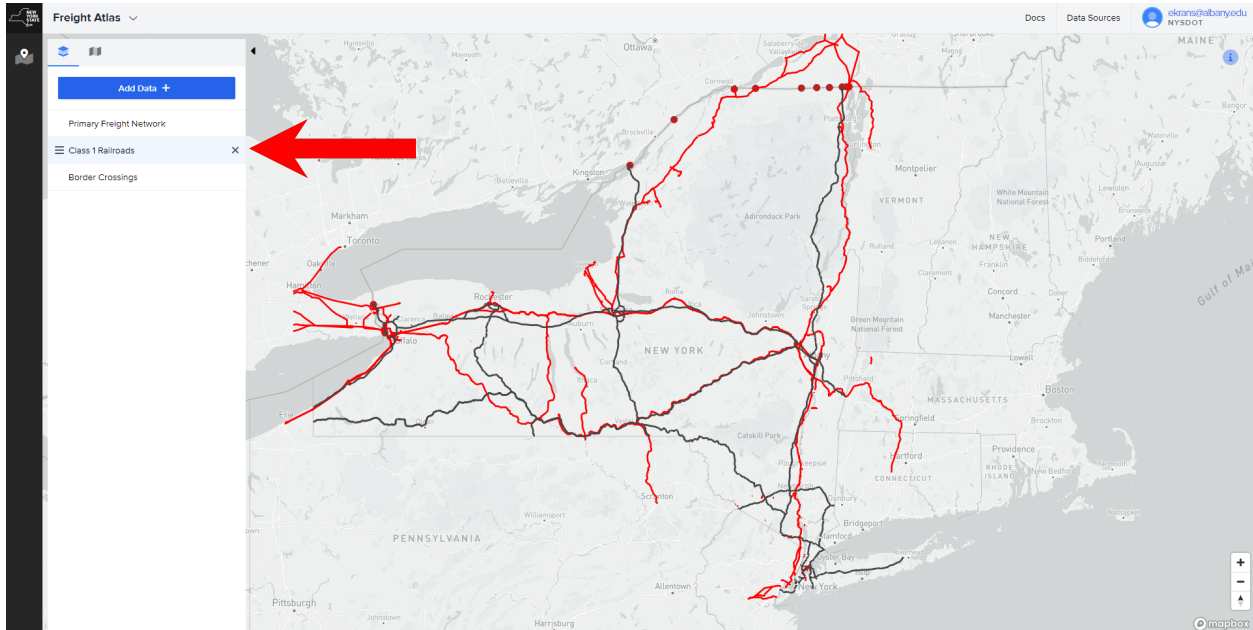

### Navigating the Atlas

We organized the state's freight-related transportation facilities into “layers” of map data (e.g., Port, Intermodal, Interstate Highway, Rail, Border Crossing, etc.) to allow you to view the state with one or more categories of freight facilities or data layers shown as you desire.

1. To add a data layer, click the blue button labeled “Add Data.” This will open a modal of all available layers organized by category. Click on a category, find a layer and click the blue plus symbol on the right. The layer will be added to the left side layer panel.

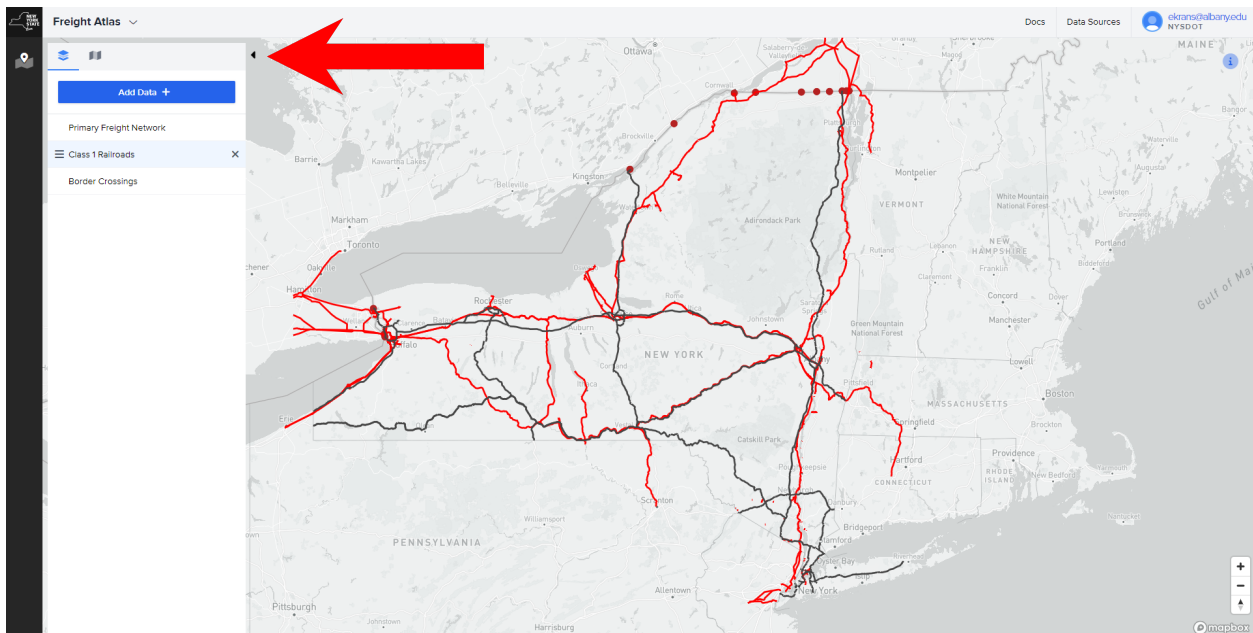

2. To remove a layer, hover your cursor on the left side panel over the layer that you wish to remove. An 'X' will appear. Click the X to remove the layer. Alternatively, you can remove selected layers via the "Add Data" modal by clicking the '-' (minus symbol).

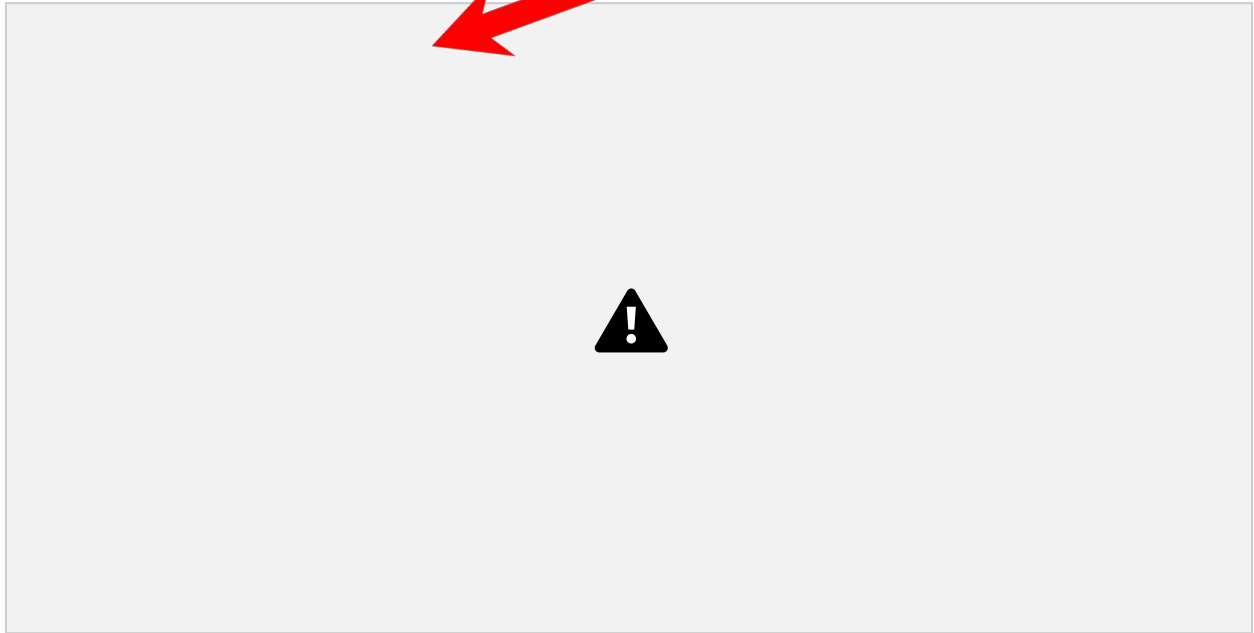

3. To zoom in or out on the map, click the + or – symbols in the bottom right corner of the screen, or scroll up and down with your mouse.

4. To hide the menu content, click on the black arrow at the top right of the left side layer panel. To access the layer panel again click the black arrow.

5. To download data as a shapefile, geojson, or csv, click on the layer in the left side panel to open the layer controls menu. The download button is located in the top right corner of the layer controls.

6. To hide this user guidance box, click the 'X' in the top right. To access it again click the information symbol (i) in the top right of the map.
